Copy and move files and Directories

What will you learn:

- ❑ copy files and Directories

- ❑ rename files and directories

- ❑ move files and directories

Summary:

$cp -> copy a file to another file or directory. Override if the File already exists in the destination

   Options:

      -r   -> Copy a directory recursively

      -i   -> interactive copying (prompt before override if file/directory already exists)

$mv -> move or rename a file or directory. Renames if the source and destination are under same directory , else move

   Options:

      -i   -> Interactive moving (prompt before override if the file/directory already exists in the   -i   destination directory)
